

**XVI Polish – Ukrainian Symposium**  
*Theoretical and Experimental Studies  
of Interfacial Phenomena  
and Their Technological Applications*

August 28-31, 2018

Lublin, Poland

Ministerstwo Nauki  
i Szkolnictwa Wyższego

*Organizacja konferencji: XVI Polish-Ukrainian Symposium on Theoretical and Experimental Studies of Interfacial Phenomena and Their Technological Applications - zadanie finansowane w ramach umowy 515/P-DUN/2018 ze środków Ministra Nauki i Szkolnictwa Wyższego przeznaczonych na działalność upowszechniającą naukę*

Edited by: **E. V. Aksenenko, R. Leboda, B. Charmas and Yu. I. Tarasevich**

Scientific Reviewer: **J. Narkiewicz-Michalek**

ISBN 978-83-60988-26-8

Printed by Bema Graphics S. C. - <https://www.bema24.pl>

Lublin 2018

### **Honorary Committee:**

**Professor Stanisław Michałowski,**

*Rector for the Maria Curie Skłodowska University in Lublin*

**Professor Anna Deryło-Marczewska,** *Dean of the Faculty of Chemistry,*

*Maria Curie Skłodowska University in Lublin*

### **Scientific Co-Chairpersons of the Symposium:**

**Dr. hab. Barbara Charmas**

*Faculty of Chemistry, Maria Curie-Skłodowska University*

**Dr. hab. Jadwiga Skubiszewska-Zięba**

*Faculty of Chemistry, Maria Curie-Skłodowska University*

**Full Member of NASU, Professor Mykola T. Kartel**

*O. Chuiko Institute of Surface Chemistry NASU*

**Corresponding Member of NASU, Volodymyr V. Brei**

*Institute for Sorption and Problems of Endoecology NASU*

### **Scientific Committee members:**

**Prof. B. Błażejowski** (Poland)

**Prof. B. Buszewski** (Poland)

**Prof. S. Chibowski** (Poland)

**Prof. J. Choma** (Poland)

**Prof. A. Dąbrowski** (Poland)

**Prof. A. Deryło-Marczewska** (Poland)

**Prof. B. Gawdzik** (Poland)

**Prof. A. Gierak** (Poland)

**Prof. M. Glikin** (Ukraine)

**Full Member of NASU**

**V. Goncharuk** (Ukraine)

**Prof. V. Gun'ko** (Ukraine)

**Prof. W. Janusz** (Poland)

**Prof. Ya. Kalychak** (Ukraine)

**Prof. I. Kocemba** (Poland)

**Full Member of NASU**

**V. Koshechko** (Ukraine)

**Dr. hab. R. Łyszczek** (Poland)

**Prof. J. Narkiewicz-Michalek** (Poland)

**Prof. M. Nikolenko** (Ukraine)

**Prof. A. Nosal-Wiercińska** (Poland)

**Corr. Member of NASU S. Orlyk** (Ukraine)

**Prof. L. Patrylak** (Ukraine)

**Dr. hab. B. Podkościelna** (Poland)

**Prof. T. Rakyts'ka** (Ukraine)

**Prof. W. Rudzinski** (Poland)

**Prof. J. Ryczkowski** (Poland)

**Prof. J. Rynkowski** (Poland)

**Prof. H. Sobczuk** (Poland)

**Prof. S. Soloviev** (Ukraine)

**Dr. hab. M. Sprynskyy** (Poland)

**Prof. M. Soltys** (Ukraine)

**Full Member of NASU V. Strelko** (Ukraine)

**Prof. V. Tertykh** (Ukraine)

**Corr. Member of NASU V. Turov** (Ukraine)

**Prof. A. Voelkel** (Poland)

**Prof. M. Wiśniewska** (Poland)

**Corr. Member of NASU V. Zazhygalov**  
(Ukraine)

### **Organising Committee:**

**Dr. hab. Barbara Charmas** (Chair), **Dr. hab. Jadwiga Skubiszewska-Zięba,**

**Dr. Eugene Aksenenko** (Secretary), **Prof. Jolanta Narkiewicz-Michalek,**

**Dr. Ewa Skwarek,** **Dr. Dariusz Sternik,** **Dr. Konrad Terpilowski,**

**mgr. Karolina Kucio**

Powdered delivery composites based on bee pollen and kaolin clays <i>V.V. Paientko, E. Skwarek, D. Sternik, V.I. Kulikouskaya, O.I. Oranska, Yu.I. Gornikov, A.K. Matkovsky, E.M. Pakhlov, V.M. Gun'ko</i> .....	112
Influence of the substituent on furanose ring puckering. A molecular dynamics study <i>K. Pańczyk, W. Plazinski</i> .....	113
Influence of magnetic field on adsorptive and electrokinetic properties of an interface: SiO <sub>2</sub> /polymer in non-aqueous solution (ethanoic alcohol) <i>J. Patkowski</i> .....	114
Influence of modification by Zr and La on the porous characteristics of in situ synthesized FCC catalysts <i>L.K. Patrylak, O.P. Pertko, D.V. Molodyi</i> .....	115
The use of natural sorbents to remove copper ions from aqueous solutions <i>A. Pawłowska, P. Hucko, Z. Sadowski</i> .....	116
Polyester geotextiles for landscape design <i>L.V. Pelyk, V.O. Vasylechko, O.V. Kyrychenko</i> .....	117
Surface properties of egg white isolate/gelatin mixed gels deposited on PET support activated by cold plasma <i>S. Peréz Huertas, K. Terpiłowski, M. Chodkowski</i> .....	118
Surface properties of gelatin gels deposited on solid supports <i>S. Peréz Huertas, K. Terpiłowski, L. Hołysz, M. Chodkowski</i> .....	119
The electro-surface properties of modified titanium dioxide in its aqueous suspensions <i>R.S. Petryshyn, M.M. Soltys, Z.M. Yaremko</i> .....	120
Biopolymers – characterization, modification and chosen applications <i>B. Podkościelna</i> .....	121
Synthesis and study of porous structure of polymeric microspheres based on S,S'thiodi-4,1- phenylenebis(tiomethacrylate) <i>B. Podkościelna, B. Gawdzik, P. Podkościelny, K. Nieszporek</i> .....	122
The application of chlorinated phenol derivatives for the synthesis of polymeric ion exchangers <i>B. Podkościelna, D. Kołodyńska, B. Gawdzik, Z. Hubicki</i> .....	123
Synthesis and characterization of hybrid polymeric microspheres with Tb(III) complexes <i>B. Podkościelna, R. Łyszczek, Yu. Bolbukh, J. Nowak, A. Lipke</i> .....	124
Adsorption of nitroaromatic compounds by carbon nanotubes from aqueous solutions <i>P. Podkościelny, K. Nieszporek, J. Nieszporek</i> .....	125
Column, kinetic and isotherm studies of C.I. Acid Red 18 on anion exchange resins from aqueous solutions <i>E. Polska-Adach, M. Wawrzekiewicz, Z. Hubicki, P. Telenga</i> .....	126
Conversion of D-fructose into ethyl lactate over SnO <sub>2</sub> /Al <sub>2</sub> O <sub>3</sub> catalyst <i>S.V. Prudius, V.V. Brei</i> .....	127
Cyclosporine A – behaviour within model biomembranes <i>K. Przykaza, M. Jurak, A.E. Wiącek, A. Gozdecka, K. Woźniak</i> .....	128

## **Polyester geotextiles for landscape design**

*L.V. Pelyk<sup>1</sup>, V.O. Vasylechko<sup>1,2</sup>, O.V. Kyrychenko<sup>3</sup>*

<sup>1</sup>*Lviv Trade and Economic University, Samchouk Str., 9, 79005 Lviv, Ukraine, lpelyk@gmail.com;*  
<sup>2</sup>*Ivan Franko National University of Lviv, Kyryla & Mephodiya Str., 6, 79005 Lviv, Ukraine;* <sup>3</sup>*Poltava University of Economics and Trade, 3 Koval St., Poltava 36014, Ukraine.*

Geotextile materials are more commonly used in road construction, though they are also often applied in landscape architecture design. Geotextiles are put inside various earthwork structures (terraces), slopes, declivities, drainage systems, etc. These materials prevent mixing of different material layers, strengthen loose ground, protect hydraulic systems from physical and mechanical destructions, restrain the growth of plants roots and weed germination. Inside the soil, geotextiles are affected by dampness, temperature changes, soil pH, vital activities of microorganisms and animals, they resist the pressure of layers with different fraction sizes.

Use of polyester fibers makes it possible to produce geotextile materials with certain wear resistance properties. Fibers are specified by good mechanical properties, though they can be hydrolyzable. So, it is necessary to determine soil pH. Taking into account that soil is a culture medium for microorganisms growth and their vital activities, it is essential to examine geotextiles resistance to bio destructors activity. Testing in natural environment was performed by digging non-woven textile fabrics into the active soil for 12 and 24 months.

Damage of fabrics integrity with plants roots was analysed after 12 and 24 months of load on the materials. Signs of microbiological destructions were found on the fibers (local thickening, cracking, horizontal splits). Damages characterized by thickening had recesses as well as swelling in some areas. These changes in polyester fibers macrostructure can be the result of microorganisms generation on certain areas. Culture media for active spread of micro destructors are dyes, saturating composites, that produce surface damages, which is partly loosened by microorganisms.

For non-saturated geotextile non-woven fabrics, having been in soil for 12 months, the number of mesophilic aerobic and optionally anaerobic microorganisms increased to  $1.2 \times 10^6$  colony forming units per 1 gram, during 24 months they increased to  $7.8 \times 10^6$  and to  $7.9 \times 10^8$  colony forming units per 1 gram for materials saturated by acrylic polymer binders. In total, after testing in natural environment, the share of microbiological destruction by bacteria was 99.9%, and by fungi and yeasts – only 0.1%.

These signs of microbiological destruction do not crucially affect the indicative values of physical and mechanical properties of geotextile non-woven materials. Thus, after 12 months, the growth of critical durability by 3% over the length and by 20% over the width was observed. After 24 months, the critical durability of these materials reduced by 8% over the length, but there was the growth over the width due to the increase of surface density and thickness as a result of considerable colmatation with soil particles. Saturated geotextile non-woven material under study was characterized by the reduction of critical durability by 18% over the width. The value of relative stretching at the moment of tearing also decreased after 12 and 24 months of natural testing. The process of colmatation of geotextile non-woven materials also affects their porosity that, in its turn, depends on their nature, fibers location and fixation, thickness, surface density, and fibers processing. So, the largest value of the porosity of non-processed geotextile non-woven materials is 93.64%, and for thermoset, calendered is 86.91% at an average. Thus, during active usage, geotextiles are affected by number of factors that lead to value changes of physical and mechanical properties as a result of destructive processes.
